Construction
Dashboard**

Know where you want to be tomorrow

Your future awaits

Visualize your data and know where you are today to measure and make decisions on where you want to be tomorrow. Combine 3D design data with aerial mapping and intelligent machine data to confirm quantities and see progress each day with Komatsu **Smart Construction Dashboard**.

Gain greater project clarity

Visualize your job site in 3D with design data, aerial mapping (drone) data and machine as-built data all in one easy-to-integrate location.

Choose what to measure

Easily quantify volumetric production measurements for the whole site or defined areas of interest: initial survey vs. design, today vs. design, or comparing any day in-between.

Quickly measure stockpile quantities

Users can make stockpile measurements in a snap for material quantities, reporting in terms of volumes, tonnage, and even assign costs to material.

Collaborate in the portal and offline

Easily generate industry-standard cut/fill color mappings for staff to visualize material movements, creating standardized reports for download, email or print.

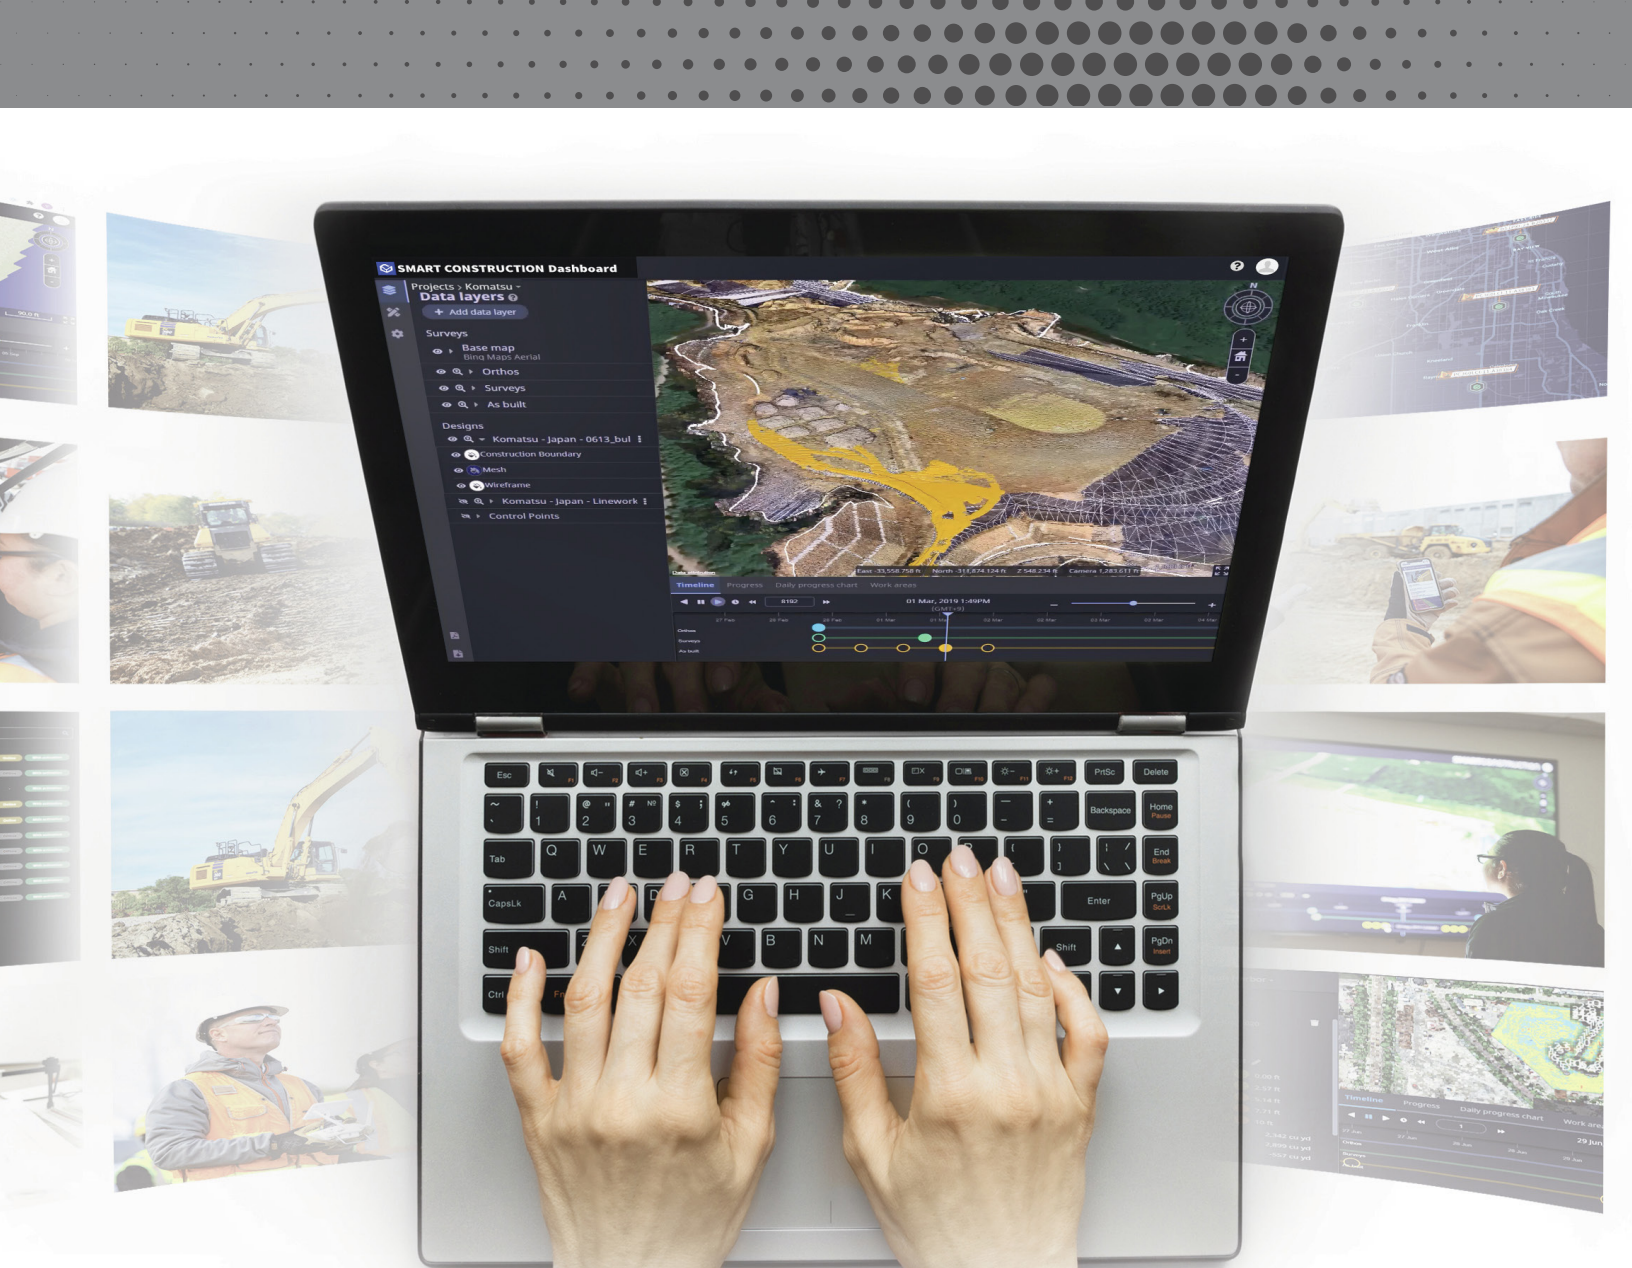

Reimagine the possible

Know how much material you're moving between flights by using your machine's as-built data.

Visualize your site progress

Watch your site progress with timeline functions, including playback, for the whole site. Investigate more deeply with cross sections and individual measurements.

KOMATSU

No matter where you are on your technology journey, our Technology Solutions Experts can help guide and support you.
